Dear Students,

Greetings!

We are pleased to inform you that a two-week value-added course on embalming is being organized from 10.02.2025 to 22.02.2025. This course aims to enhance your skills in this important field of study.

Details of the course:

Duration: 2 weeks

Dates: 10.02.2025 to 22.02.2025.

Venue: demo room and Embalming room

Objective: Enhancing skills in embalming

This course presents a valuable opportunity for you to deepen your understanding and proficiency in embalming techniques. We encourage all 1st MBBS students to participate actively and make the most out of this learning experience.

For further information and registration, please contact Dr. Poonam 8748084852
Dr. Raghuraj 977981-1211922

We look forward to your enthusiastic participation.

Detailed Value added Course Plan on Embalming

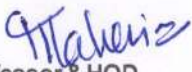

1. Introduction to Embalming: Understanding the history, purpose, and techniques of embalming in various cultures and contexts.
2. Anatomy and Physiology: Detailed study of human anatomy and physiology, focusing on the circulatory system, tissues, and organs relevant to embalming procedures.
3. Chemistry of Embalming Fluids: Exploring the composition and function of embalming fluids, including their chemical properties and how they interact with bodily tissues.
4. Embalming Techniques: Hands-on training in embalming techniques, including arterial embalming, cavity embalming, and surface embalming.
5. Health and Safety: Comprehensive understanding of health and safety protocols, including proper handling of chemicals, personal protective equipment (PPE), and infection control measures.
6. Ethical and Legal Considerations: Examination of ethical dilemmas and legal regulations surrounding embalming practices, including consent, cultural considerations, and environmental impact.
7. Case Studies and Practical Application: Analyzing real-life case studies to apply theoretical knowledge to practical situations, preparing students for real-world scenarios they may encounter in their future careers.
8. Communication Skills: Developing effective communication skills for interacting sensitively with grieving families and collaborating with other professionals in the funeral industry.
9. Continuing Education and Professional Development: Emphasizing the importance of ongoing learning and professional development in the field of embalming, including opportunities for further specialization and certification.
10. Final Assessment and Certification: Evaluation of students' knowledge and skills through written exams, practical demonstrations, and possibly a final embalming project, leading to certification upon successful completion of the course.

1 Ethics

Clinical trials should be conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki, and that are consistent with GCP and the applicable regulatory requirement(s).

2 Trial risk vs trial benefit

Before a trial is initiated, foreseeable risks and inconveniences should be weighed against the anticipated benefit for the individual trial subject and society. A trial should be initiated and continued only if the anticipated benefits justify the risks.

3 Trial participants

The rights, safety, and well-being of the trial subjects are the most important considerations and should prevail over interests of science and society.

4 Information on the Medicinal Product

The available non-clinical and clinical information on an Investigational Product should be adequate to support the proposed clinical trial.

5 Good quality trials

Clinical trials should be scientifically sound, and described in a clear, detailed protocol.

6 Compliance with the study protocol

trial should be conducted in compliance with the protocol that has received prior institutional review board (IRB)/independent ethics committee (IEC) approval/favourable opinion.

7 Medical decisions

The medical care given to, and medical decisions made on behalf of, subjects should always be the responsibility of a qualified physician or, when appropriate, of a qualified dentist.

8 Trial staff

Each individual involved in conducting a trial should be qualified by education, training, and experience to perform his or her respective task(s).

13 Quality assurance

Systems with procedures that assure the quality of every aspect of the trial should be implemented.

12 Good Manufacturing Practice

Investigational products should be manufactured, handled, and stored in accordance with applicable good manufacturing practice (GMP). This should be done in accordance with the approved protocol.

11 Confidentiality

The confidentiality of records that could identify trial subjects should be maintained in accordance with applicable regulatory requirement(s).

10 Clinical trial data

All clinical trial information should be recorded, stored, and managed in a way that allows its accurate reporting, interpretation, and analysis.

9 Informed consent

Freely given informed consent should be obtained from every subject prior to clinical trial participation.

13 Principles of Good Clinical Practice

participant received a suturing kit, which allowed for hands-on practice throughout the session.

Under the guidance of the resident doctors, the participants were individually taught the different types of sutures, starting from basic simple sutures to more advanced techniques like the surgeon's knot. The one-on-one attention and practical demonstrations significantly enhanced our understanding and technique.

Overall, it was an engaging and enriching experience. The workshop was not only educational but also thoroughly enjoyable, it was a well-organized and valuable learning opportunity.
